

D1
B1
a derivative or homologue thereof and a stabilizing agent, additives for maintaining pH and isotonicity and one or more pharmaceutically acceptable carriers wherein the pH of the composition is between about 3.5 and 6.5.

2. (Amended) A composition according to any one of claims 1 or 44 or 45 wherein the stabilizing agent facilitates reduced aggregation of LIF.

3. (Amended) A composition according to any one of claims 1 or 44 or 45 wherein the stabilizing agent facilitates a reduction in the deamidation of LIF.

D1
B2
6. (Amended) A composition according to claim 1 wherein the stabilizing agent is an agent which increases or maintains the conformational stability of LIF or its derivatives of homologues or functional equivalents thereof.

7. (Amended) A composition according to claim 6 wherein the stabilizing agent is selected from a polyhydric alcohol, a pharmaceutically acceptable salt, a buffer species, a sugar and a pharmaceutically acceptable polymeric compound.

D1
B3
14. (Amended) A composition comprising leukaemia inhibitory factor (LIF), additives for maintaining pH and isotonicity and one or more pharmaceutically acceptable carriers and/or diluents and wherein the composition has a pH of between about 3.5 and 6.5.

15. (Amended) A composition according to claim 14 wherein the aggregation of LIF is reduced over time.

16. (Amended) A composition according to claim 14 or 48 or 49 wherein the deamidation of LIF is reduced over time.

17. (Amended) A composition according to claim 14 or 48 or 49 where the pH is maintained by the presence of a buffer species selection from a phosphate, citrate and

B³
D⁻¹
acetate buffer.

D¹
B⁴
21. (Amended) A method for preparing a composition comprising leukaemia inhibitory factor (LIF) or a derivative or homologue thereof and which exhibits reduced deamidation and/or aggregation of LIF or its derivative or homologues over time said method comprising admixing LIF or its derivative or homologue with a stabilizing agent and additives for maintaining pH and isotonicity.

22. (Amended) A method according to claim 21 wherein the stabilizing agent is an agent which increases or maintains the conformational stability of LIF or its derivatives or homologues or a surfactant or functional equivalents thereof.

23. (Amended) A method according to claim 22 wherein the stabilizing agent is selected from a polyhydric alcohol, a pharmaceutically acceptable salt, a buffer species, a sugar and a pharmaceutically acceptable polymeric compound.

D¹
B⁵⁻
28. (Amended) A method according to claim 21 wherein the additives for maintaining pH and isotonicity are selected from a phosphate, citrate and acetate buffer.

29. (Amended) A method according to claim 28 wherein the additives for maintaining pH and isotonicity are citrate or acetate buffer.

30. (Amended) A method according to claim 21 further comprising adjusting the pH to between about 3.5 and about 6.5.

B⁶ D¹
32. (Amended) A method according to claim 21 further comprising admixing one or more pharmaceutically acceptable carriers and/or diluents.

D¹
B⁷
34. (Amended) A method according to claim 54 wherein the stabilizing agent is selected from a polyhydric alcohol, a pharmaceutically acceptable salt, a buffer species, a

sugar and a pharmaceutically acceptable polymeric compound.

35. (Amended) A method according to claim 34 wherein the polyhydric alcohol is sorbitol.

36. (Amended) A method according to claim 34 wherein the surfactant is an anionic, cationic, amphoteric or non-ionic surfactant.

37. (Amended) A method according to claim 36 wherein the surfactant is selected from a fatty alcohol, glyceryl ester and a fatty acid ester of a fatty alcohol or other alcohol.

38. (Amended) A method according to claim 54 where the stabilizing agent is selected from a polysorbate, a polyoxyethylene derivative or a pharmaceutically acceptable polyoxyethylene-polyoxypropylene copolymer.

39. (Amended) A method according to claim 34 wherein the buffer species is selected from a phosphate, citrate and acetate buffer.

40. (Amended) A method according to claim 39 wherein the buffer species [isa] is a citrate or acetate buffer.

41. (Amended) A method according to claim 54 where the pH of the composition is between about 3.5 to about 6.5.

42. (Amended) A method according to claim 41 wherein the pH is between about 4.5 and about 5.5

43. (Amended) A composition according to claim 13 wherein LIF is present in an amount from about 0.1 $\mu\text{g/ml}$ to about 100 mg/ml .

Please add the following new Claims 44-55:

- D 1
- B 9
44. (New) A composition according to claim 1 wherein the pH of the composition is between about 4.5 and 6.5.
45. (New) A composition according to claim 2 wherein the pH of the composition is between about 4.5 and 6.0.
46. (New) A composition according to claim 6 wherein the stabilizing agent is a surfactant.
47. (New) A composition according to claim 9 wherein the stabilizing agent is polysorbate 20 and/or polysorbate 80.
48. (New) A composition according to claim 14 wherein the composition has a pH of between about 4.5 and 6.5.
49. (New) A composition according to claim 48 wherein the composition has a pH of between about 4.5 and 6.0.
50. (New) A method according to claim 23 wherein the stabilizing agent is selected from a polysorbate, a polyoxyethylene derivative and a pharmaceutically acceptable polyoxyethylene-polyoxypropylene copolymer.
51. (New) A method according to claim 50 wherein the polysorbate is polysorbate 20 and/or polysorbate 80.
52. (New) A method according to claim 30 further comprising adjusting the pH to between about 4.5 and about 6.5.
53. (New) A method according to claim 30 further comprising adjusting the pH to between about 4.5 and 6.0.
